WEBSITE STRUCTURE RECOMMENDATION

Group the services into three categories:

For Buyers & Homeowners

- Standard Home Inspection
- Move-In Certification
- Snagging Inspection
- Home Health Check

For Developers & Builders

- Foundation Stage Inspection
- Pre-Cover Compliance Inspection
- Construction Control Inspection
- Construction Certification

For Investors & Property Managers

- Commercial Inspection
- Estate Safety Audit
- Global Property Monitoring

STANDARD HOME INSPECTION (SHI)

Know the True Condition of a Property Before You Commit

Short Service Summary

A Standard Home Inspection is a comprehensive assessment of a property's visible condition, safety, functionality, and major building systems. It helps buyers, owners, investors, lenders, and occupants identify defects, reduce risk, and make informed decisions before purchase, occupancy, financing, or investment.

Overview

A property may look impressive on the surface and still contain defects that affect safety, performance, comfort, or long-term value.

Many property issues remain hidden during routine viewings and only become apparent after purchase or occupancy. Roof leaks, plumbing defects, electrical hazards, drainage problems, structural concerns, and workmanship deficiencies can result in significant repair costs and unnecessary stress.

The HINL Standard Home Inspection (SHI) provides a professional, independent assessment of a property's visible condition at the time of inspection.

Our inspectors evaluate the property's major systems and components, identify defects and deficiencies, and provide objective findings to help clients understand the true condition of the property.

Whether you are buying, selling, financing, investing, renting, or maintaining a property, a Standard Home Inspection provides valuable insight that supports better decision-making.

Because confidence comes from knowing—not assuming.

Why It Matters

A property can be fully valued, legally documented, and insured—yet still contain hidden defects.

Many buyers focus on appearance, location, documentation, and price while overlooking the actual condition of the building itself.

Common issues discovered during inspections include:

- Roof leaks
- Electrical safety hazards
- Plumbing defects
- Drainage problems
- Structural cracking
- Water intrusion
- Dampness and mold
- Poor workmanship
- Defective installations
- Deferred maintenance

A Standard Home Inspection helps:

- Reduce uncertainty
- Identify visible defects and deficiencies
- Improve purchase decisions
- Support negotiations
- Reduce unexpected repair costs
- Improve maintenance planning
- Protect investments
- Improve safety and peace of mind

The objective is not to find fault—it is to provide clarity.

What's Included

Site & External Areas

Inspection of:

- Site grading
- Surface drainage
- Walkways and paving
- Boundary walls
- Retaining structures
- External features
- General site conditions

Structural Assessment

Inspection of visible:

- Foundations (where accessible)
- Columns
- Beams
- Walls
- Slabs
- Structural cracking
- Settlement indicators
- Structural movement observations

Roofing System

Inspection of:

- Roof coverings
- Flashings
- Gutters
- Downpipes
- Roof drainage systems
- Visible roof defects
- Water management provisions

Building Envelope

Assessment of:

- External walls
- Doors
- Windows
- Glazing
- Balconies
- Terraces
- Weatherproofing observations

Interior Areas

Inspection of:

- Floors
- Walls
- Ceilings
- Internal doors
- Internal windows
- Stairs and handrails
- Built-in components
- General finishes

Electrical Systems

Inspection of visible:

- Distribution boards
- Circuit protection devices
- Switches
- Outlets
- Light fixtures
- Earthing observations
- Electrical safety concerns

Plumbing Systems

Assessment of:

- Water supply systems
- Drainage systems
- Plumbing fixtures
- Water storage systems
- Visible leaks
- Plumbing-related concerns

HVAC & Ventilation

Inspection of:

- Air-conditioning systems
- Ventilation provisions
- Condensate drainage
- General operational observations

Fire & Life Safety

Assessment of:

- Safety hazards
- Guarding and handrails
- Escape route observations
- Fire safety provisions (where installed)
- General life safety concerns

General Maintenance Review

Identification of:

- Deferred maintenance
- Aging components
- Property condition concerns
- Repair priorities
- Recommended corrective actions

Defect Identification

Identification and documentation of:

- Safety concerns
- Workmanship deficiencies
- Installation defects
- Maintenance issues
- Property condition concerns

Who Is This Service For?

Home Buyers

Understand the true condition of a property before purchase.

Property Owners

Identify maintenance concerns and protect your investment.

Property Investors

Reduce risk and improve investment decisions.

Diaspora Clients

Receive independent insight when you cannot be physically present.

Mortgage Applicants

Gain additional confidence before financing or acquisition.

Property Managers

Establish a baseline understanding of property condition.

Corporate Clients

Assess staff accommodation and residential assets.

What You Receive

Comprehensive Digital Inspection Report

A professionally prepared report containing:

- Detailed findings
- Defect descriptions
- Property condition observations
- Supporting photographs
- Safety observations
- Maintenance concerns
- Recommended actions

Defect Classification

Findings are categorized as:

● Unsafe

 Correction Required

 Monitor

 Acceptable

Property Condition Summary

A concise overview highlighting:

- Major concerns
- Priority defects
- Safety issues
- Recommended next steps

Professional Consultation

Opportunity to discuss findings and recommendations with an HINL inspector.

Limitations

The Standard Home Inspection is a non-invasive visual inspection of readily accessible systems and components at the time of inspection.

The service does not include:

- Destructive testing
- Engineering analysis
- Property valuation
- Legal verification
- Specialist investigations
- Concealed components
- Future performance guarantees

Additional specialist evaluations may be recommended where necessary.

Why Choose HINL?

At HINL, we believe that every property decision should be supported by reliable information.

Our Standard Home Inspection provides independent, objective, and professional insight into the condition of a property, helping clients understand risks, identify defects, and make informed decisions with confidence.

Whether you are buying your first home, investing in property, relocating from abroad, or protecting an existing asset, our inspections help ensure that important decisions are based on facts rather than assumptions.

Because the true condition of a property matters.

Call To Action

Know Before You Commit.

Understand the Property Before It Becomes Your Responsibility.

Inspect Before You Invest.

MOVE-IN CERTIFICATION (MIC)

Move Into Your Home With Confidence

Short Service Summary

A Move-In Certification is a focused inspection and certification service designed to assess whether a completed property is suitable for occupancy. It helps buyers, tenants, and property owners identify safety concerns, functional deficiencies, and outstanding issues before moving into a new home.

Overview

Moving into a new home is one of life's most significant milestones. Whether the property is newly constructed, recently renovated, rented, or purchased, understanding its condition before occupancy is essential.

The HINL Move-In Certification (MIC) is designed to provide an independent assessment of a property's readiness for occupation. Unlike a traditional home inspection that focuses on documenting the property's overall condition, the Move-In Certification focuses specifically on identifying conditions that may affect comfort, functionality, safety, and immediate habitability.

The objective is simple: to help occupants move in with confidence.

Our inspectors assess the property's major accessible systems and components, identify deficiencies requiring attention, and determine whether the property is suitable for occupancy at the time of inspection.

Why It Matters

Many properties appear complete and ready for occupation but still contain issues that may affect safety, comfort, or functionality.

Common concerns include:

- Electrical safety deficiencies
- Plumbing leaks
- Poor drainage
- Defective fixtures
- Incomplete installations

- Roof leaks
- Water penetration
- Safety hazards
- Poor workmanship
- Missing components

Identifying these issues before occupancy allows corrective action to be taken before they become costly, disruptive, or inconvenient.

A Move-In Certification provides additional peace of mind by helping occupants understand the property's condition before they move in.

What's Included

Occupancy Readiness Assessment

Evaluation of conditions that may affect immediate occupancy.

Electrical Safety Review

Assessment of visible electrical safety concerns including:

- Distribution boards
- Circuit protection
- Switches and outlets
- Visible wiring deficiencies

Plumbing & Water Systems

Inspection of:

- Water supply systems
- Fixtures
- Drainage performance
- Visible leaks

Interior Areas

Assessment of:

- Floors
- Walls
- Ceilings

- Doors
- Windows
- Stairs
- General finishes

Roofing & Water Management

Inspection of visible roofing concerns and signs of water intrusion.

HVAC & Ventilation

Assessment of installed cooling and ventilation systems where applicable.

Safety Observations

Identification of visible conditions that may pose immediate safety concerns.

Who Is This Service For?

Home Buyers

Verify the property's readiness before taking possession.

Tenants

Understand the condition of a rental property before moving in.

Property Owners

Confirm occupancy readiness following construction or renovation.

Diaspora Clients

Receive independent verification before travelling or relocating.

Corporate Housing Clients

Assess staff accommodation prior to occupancy.

What You Receive

Move-In Certification Report

A digital report detailing:

- Inspection findings
- Defect photographs
- Safety observations
- Recommended actions
- Occupancy assessment

Occupancy Classification

Properties are classified as:

 Suitable for Occupancy

 Suitable for Occupancy – Corrections Recommended

● Not Suitable for Occupancy – Corrections Required

Professional Consultation

Opportunity to discuss findings and recommendations with the inspector.

Limitations

The Move-In Certification is a non-invasive visual inspection of readily accessible components at the time of inspection.

The service does not include engineering analysis, destructive testing, or specialist investigations unless specifically requested.

Why Choose HINL?

HINL's Move-In Certification provides independent verification of a property's readiness for occupancy. Our objective is to help clients move into homes that are safer, better understood, and free from avoidable surprises.

Through professional inspections and objective reporting, we help build confidence in one of the most important decisions a person can make.

Call To Action

Move Into Your Home With Confidence.

Inspect Before You Invest.

CONSTRUCTION CONTROL INSPECTION (CCI)

Building Quality Verified at Every Stage

Short Service Summary

A Construction Control Inspection is an independent quality verification and material testing service designed to monitor workmanship, construction quality, materials, and critical building components throughout the construction process. It helps property owners, developers, lenders, and investors identify defects early, verify quality, and reduce costly rework before project completion.

Overview

The quality of a building is determined long before it is occupied.

Many of the most expensive and difficult-to-correct defects originate during construction and often become concealed behind finishes, ceilings, walls, and completed works. Once construction progresses, correcting these issues becomes significantly more expensive and disruptive.

The HINL Construction Control Inspection (CCI) provides independent oversight throughout the construction process. Our inspectors conduct scheduled inspections at key project stages to verify workmanship, construction quality, material performance, and installation practices.

Where applicable, field-based material testing may also be performed to provide additional insight into the quality and condition of construction materials and completed works.

The objective is not to supervise construction or replace project consultants. Rather, it is to provide an independent layer of quality verification that helps ensure projects are built correctly from foundation to completion.

Why It Matters

Construction defects are easier and less expensive to correct during construction than after completion.

Without independent quality verification, issues such as poor workmanship, installation errors, hidden defects, inadequate detailing, and material deficiencies may go unnoticed until they result in failures, disputes, delays, or expensive remedial works.

Construction quality depends not only on workmanship but also on the quality and performance of materials used throughout the project.

Construction Control Inspections help:

- Improve construction quality
- Reduce rework costs
- Verify workmanship standards
- Assess material quality and performance
- Identify defects before concealment
- Improve project accountability
- Protect investments
- Support quality-focused developers
- Reduce post-completion defects and complaints

For many projects, the cost of correcting a defect during construction is only a fraction of the cost of correcting it after occupancy.

What's Included

Construction Quality Verification

Assessment of workmanship quality across active construction works.

Structural Elements

Inspection of visible structural components including:

- Foundations
- Columns
- Beams
- Suspended slabs
- Reinforcement installation
- Concrete placement observations
- Structural workmanship

Material Testing & Verification

Where applicable, field-based testing may include:

- Schmidt Hammer concrete strength assessments
- Moisture testing
- Surface hardness evaluations
- Level and plumb verification
- Dimensional verification
- Alignment assessments
- Material quality observations

Building Envelope

Inspection of:

- External walls
- Openings
- Waterproofing details
- Roof construction
- Drainage provisions
- Weather protection measures

Mechanical, Electrical & Plumbing Installations

Assessment of visible service installations including:

- Electrical rough-ins
- Plumbing rough-ins
- Drainage systems
- Mechanical installations
- Service coordination

Finishes & Workmanship

Inspection of:

- Plastering
- Screeding
- Tiling
- Ceiling installations
- Painting preparation
- Joinery installations
- General workmanship quality

Defect Identification

Identification and documentation of:

- Poor workmanship

- Construction deficiencies
- Material concerns
- Non-compliant installations
- Incomplete works
- Quality-related observations

Progress Verification

Documentation of project progress at the time of inspection.

Who Is This Service For?

Property Developers

Improve project quality and reduce post-handover complaints.

Homeowners Building New Homes

Receive independent quality verification throughout construction.

Banks & Mortgage Institutions

Gain additional confidence regarding construction quality and project progress.

Investors

Protect capital by independently monitoring project quality and execution.

Diaspora Clients

Maintain visibility and confidence while building remotely.

Project Stakeholders

Improve transparency and accountability throughout project delivery.

What You Receive

Construction Control Inspection Report

A professionally prepared report containing:

- Inspection findings
- Defect photographs
- Workmanship observations
- Material testing observations
- Quality concerns
- Recommended corrective actions
- Progress documentation

Material Testing Results (Where Applicable)

- Schmidt Hammer test readings
- Moisture readings
- Alignment observations
- Level assessments
- Material quality observations

Defect Classification

Findings are categorized as:

● Unsafe

 Correction Required

 Monitor

 Acceptable

Ongoing Project Records

Inspection reports create a documented quality history throughout the project lifecycle.

Professional Consultation

Opportunity to discuss findings and recommendations with an HINL inspector.

Limitations

Construction Control Inspection is an independent quality verification service and does not replace:

- Project management
- Site supervision
- Engineering design services
- Contractor quality control responsibilities
- Laboratory testing services
- Statutory approvals or certifications

Inspections are based on conditions observed at the time of each site visit.

Why Choose HINL?

HINL helps property owners, developers, and investors build with greater confidence through independent construction quality verification and material testing.

Our inspectors provide objective assessments that help identify issues before they become hidden, expensive, or difficult to correct. By combining workmanship evaluation, material verification, and professional reporting, we help improve accountability, reduce risk, and support better building outcomes.

Because quality should not be assumed—it should be verified.

Call To Action

Build with Confidence. Verify Every Stage.

Inspect Before You Invest.

SNAGGING INSPECTION

Identify Defects Before Handover

Short Service Summary

A Snagging Inspection is a detailed assessment of a newly completed property designed to identify workmanship defects, incomplete items, finishing deficiencies, and quality concerns before final handover. It helps buyers, owners, and developers ensure that defects are identified and corrected before occupancy.

Overview

A newly completed property does not always mean a defect-free property.

Even well-constructed homes can contain workmanship deficiencies, incomplete installations, cosmetic defects, and quality concerns that may not be immediately apparent during a standard viewing.

The HINL Snagging Inspection is designed specifically for newly completed properties approaching handover. Our inspectors conduct a systematic room-by-room assessment to identify defects, unfinished works, installation issues, and quality concerns that require attention before final acceptance.

The objective is simple: to ensure that defects are identified while the contractor or developer remains responsible for correcting them.

By addressing issues before handover, property owners can avoid unnecessary disputes, inconvenience, and repair costs after moving in.

Why It Matters

Many property buyers assume a newly completed home will be free from defects.

In reality, even premium developments can contain issues such as:

- Poor workmanship
- Damaged finishes
- Defective fixtures
- Plumbing leaks

- Electrical deficiencies
- Poor drainage
- Incomplete installations
- Alignment issues
- Missing components
- Cosmetic defects

Identifying these concerns before handover provides an opportunity for corrective action while responsibility remains with the builder or developer.

A professional snagging inspection helps ensure that the property delivered is the property expected.

What's Included

Interior Finishes

Inspection of:

- Walls
- Ceilings
- Floors
- Paint finishes
- Tiling
- Joinery
- Surface finishes

Doors & Windows

Assessment of:

- Operation
- Alignment
- Locks and hardware
- Glazing
- Seals and gaskets
- Installation quality

Kitchen Areas

Inspection of:

- Cabinets

- Countertops
- Fixtures
- Sinks
- Appliances (where installed)
- Workmanship quality

Bathrooms & Wet Areas

Inspection of:

- Fixtures and fittings
- Drainage performance
- Waterproofing indicators
- Tiling quality
- Sealants
- Installation defects

Electrical Systems

Assessment of:

- Switches
- Sockets
- Lighting fixtures
- Distribution boards
- Visible electrical defects
- Functional observations

Plumbing Systems

Inspection of:

- Water fixtures
- Drainage fixtures
- Visible leaks
- Water flow observations
- Installation quality

Roofing & External Areas

Inspection of:

- Roof-related observations
- Gutters and drainage
- External finishes
- Balconies and terraces

- General workmanship

Defect Documentation

Identification and documentation of:

- Incomplete works
- Damaged components
- Installation defects
- Workmanship deficiencies
- Cosmetic concerns
- Functional deficiencies

Who Is This Service For?

New Home Buyers

Verify the quality of a newly completed home before acceptance.

Property Owners

Ensure defects are identified before taking possession.

Developers

Improve handover quality and reduce post-handover complaints.

Diaspora Clients

Receive independent verification before final acceptance.

Investors

Protect investment quality before completion and occupancy.

What You Receive

Comprehensive Snagging Report

A professionally prepared report containing:

- Detailed snag list
- Defect descriptions
- Supporting photographs
- Room-by-room findings
- Recommended corrective actions

Defect Classification

Findings are categorized as:

● Unsafe

□ Correction Required

□ Monitor

□ Acceptable

Photographic Documentation

Clear photographic evidence supporting inspection findings.

Professional Consultation

Opportunity to discuss findings and recommended actions with an HINL inspector.

Limitations

A Snagging Inspection focuses primarily on visible workmanship, finishing quality, installation deficiencies, and observable defects at the time of inspection.

The service does not replace a full Standard Home Inspection and does not include destructive testing, concealed components, engineering analysis, or specialist investigations unless specifically requested.

Why Choose HINL?

HINL provides independent snagging inspections designed to help property owners take possession with confidence.

Our systematic inspection process helps identify defects while corrective action remains practical, ensuring that buyers receive the quality they expect and developers deliver the quality they promise.

Because handover should be the beginning of confidence—not the beginning of repairs.

Call To Action

Identify Defects Before They Become Your Responsibility.

Inspect Before You Invest.

FOUNDATION STAGE INSPECTION (FSI)

Get the Foundation Right From the Start

Short Service Summary

A Foundation Stage Inspection is an independent inspection conducted before concrete placement and critical foundation works are completed. The inspection helps verify site preparation, excavation, reinforcement installation, dimensions, and foundation readiness before permanent structural work proceeds.

Overview

The foundation is one of the most important components of any building.

Mistakes made at foundation level can be difficult, expensive, and sometimes impossible to correct after construction progresses. Unfortunately, many foundation defects become permanently hidden beneath concrete, making early verification essential.

The HINL Foundation Stage Inspection (FSI) is designed to provide independent quality verification before concrete placement and critical foundation works are completed.

Our inspectors assess visible aspects of foundation preparation, reinforcement installation, dimensions, workmanship, and construction readiness to help identify concerns before they become permanent structural issues.

The objective is simple: identify defects while they can still be corrected.

Because once concrete is placed, opportunities for correction become significantly more limited and costly.

Why It Matters

Many of the most serious construction defects originate during foundation construction.

Common issues may include:

- Inadequate excavation
- Improper reinforcement placement
- Poor foundation dimensions

- Insufficient concrete cover
- Poor workmanship
- Drainage concerns
- Foundation alignment issues
- Non-compliance with approved drawings
- Unsuitable site preparation

Identifying these issues before concrete placement helps reduce structural risks, improve construction quality, and prevent expensive remedial work later in the project.

The earlier a defect is identified, the easier and less expensive it is to correct.

What's Included

Site Preparation Assessment

Inspection of:

- Site conditions
- Excavation quality
- Foundation trenches
- Foundation preparation works
- Drainage considerations

Foundation Layout Verification

Assessment of:

- Foundation positioning
- General dimensions
- Alignment observations
- Layout consistency with available drawings

Reinforcement Inspection

Inspection of:

- Reinforcement placement
- Reinforcement spacing
- Reinforcement support arrangements
- Reinforcement continuity
- General installation quality

Concrete Readiness Assessment

Evaluation of:

- Foundation readiness prior to concrete placement
- Formwork observations
- Access and placement considerations
- General workmanship

Structural Observations

Inspection of visible foundation-related structural elements and construction practices.

Material Verification

Where applicable:

- Reinforcement observations
- Material condition observations
- Construction material quality concerns

Defect Identification

Identification and documentation of:

- Installation deficiencies
- Workmanship concerns
- Structural observations
- Foundation preparation issues
- Corrective actions required before concrete placement

Who Is This Service For?

Homeowners Building New Homes

Verify foundation quality before permanent construction proceeds.

Property Developers

Reduce construction risk and improve project quality.

Banks & Mortgage Institutions

Gain additional confidence regarding foundation construction quality.

Investors

Protect capital through independent construction verification.

Diaspora Clients

Receive independent oversight while building remotely.

Project Stakeholders

Improve transparency and accountability during early-stage construction.

What You Receive

Foundation Stage Inspection Report

A professionally prepared report containing:

- Inspection findings
- Photographs
- Reinforcement observations
- Workmanship observations
- Construction concerns
- Recommended corrective actions

Defect Classification

Findings are categorized as:

● Unsafe

□ Correction Required

□ Monitor

□ Acceptable

Photographic Documentation

Photographs supporting all major observations and findings.

Professional Consultation

Opportunity to discuss findings and recommended actions before concrete placement proceeds.

Limitations

The Foundation Stage Inspection is conducted based on site conditions visible and accessible at the time of inspection.

The service does not include:

- Structural engineering design review
- Geotechnical investigations
- Laboratory testing
- Destructive testing
- Statutory approvals

Inspection findings are limited to conditions observed during the inspection visit.

Why Choose HINL?

HINL helps clients verify construction quality before critical structural elements become permanently concealed.

Our Foundation Stage Inspection provides independent oversight at one of the most important stages of the building process, helping identify issues before they become embedded within the structure.

Because every successful building starts with a solid foundation.

Call To Action

Verify Before You Pour.

Inspect Before You Invest.

PRE-COVER COMPLIANCE INSPECTION (PCC)

Verify Before It Is Hidden

Short Service Summary

A Pre-Cover Compliance Inspection is an independent inspection conducted before walls, ceilings, floors, and service installations are covered or concealed. The inspection helps identify workmanship deficiencies, installation defects, and quality concerns while corrective action remains practical and cost-effective.

Overview

Many of the most expensive building defects are hidden behind finishes.

Once walls are plastered, ceilings installed, floors completed, and services concealed, identifying and correcting defects becomes significantly more difficult, disruptive, and costly.

The HINL Pre-Cover Compliance Inspection (PCC) is designed to assess critical building elements before they become permanently hidden from view.

Our inspectors evaluate visible construction works, service installations, structural elements, and workmanship quality to help ensure that defects are identified before construction progresses to the next stage.

This inspection represents one of the most valuable opportunities to verify construction quality because hidden defects are often easier to correct before concealment.

Why It Matters

Construction defects discovered after completion can result in:

- Demolition of finished works
- Costly rework
- Construction delays
- Water leaks
- Electrical failures
- Structural concerns

- Service installation defects
- Occupancy disruptions

Many of these issues originate during construction and become concealed behind walls, ceilings, and finishes.

A Pre-Cover Compliance Inspection helps:

- Identify defects before concealment
- Verify workmanship quality
- Reduce future repair costs
- Improve construction quality
- Improve project accountability
- Support quality-focused construction practices
- Reduce post-completion defects

Correcting a defect before it is covered is often far easier and less expensive than correcting it after completion.

What's Included

Structural Elements

Inspection of visible structural components including:

- Columns
- Beams
- Suspended slabs
- Reinforcement observations
- Structural workmanship
- Structural openings and penetrations

Electrical Installations

Inspection of visible electrical rough-ins including:

- Conduit installations
- Cable routing
- Electrical boxes
- Distribution provisions
- Service penetrations
- General installation quality

Plumbing Installations

Inspection of:

- Water supply piping
- Drainage systems
- Waste piping
- Venting provisions
- Pipe routing
- Plumbing workmanship

Mechanical Installations

Assessment of visible mechanical and HVAC installations including:

- Air-conditioning provisions
- Condensate routing
- Ventilation provisions
- Service penetrations
- Installation quality

Building Envelope

Inspection of:

- External wall construction
- Waterproofing provisions
- Openings and penetrations
- Weather protection measures

Workmanship Verification

Assessment of:

- Construction quality
- Installation standards
- Service coordination
- General workmanship observations

Defect Identification

Identification and documentation of:

- Installation deficiencies
- Poor workmanship
- Service conflicts

- Incomplete works
- Quality concerns
- Corrective actions required prior to concealment

Who Is This Service For?

Homeowners Building New Homes

Verify construction quality before walls and ceilings are completed.

Property Developers

Improve project quality and reduce hidden defects.

Banks & Mortgage Institutions

Obtain additional confidence regarding project quality and construction progress.

Investors

Protect capital by verifying critical construction works before concealment.

Diaspora Clients

Maintain visibility and confidence while building remotely.

Project Stakeholders

Improve transparency and accountability during construction.

What You Receive

Pre-Cover Compliance Inspection Report

A professionally prepared report containing:

- Inspection findings
- Defect photographs
- Installation observations
- Workmanship concerns

- Quality observations
- Recommended corrective actions

Defect Classification

Findings are categorized as:

● Unsafe

 Correction Required

 Monitor

 Acceptable

Photographic Documentation

Clear photographic evidence of visible conditions before concealment.

Professional Consultation

Opportunity to discuss findings and recommended corrective actions before works proceed.

Limitations

The Pre-Cover Compliance Inspection is limited to conditions visible and accessible at the time of inspection.

The service does not include:

- Engineering design review
- Laboratory testing
- Destructive testing
- Statutory approvals
- Contractor supervision

Inspection findings are based solely on observable conditions at the time of inspection.

Why Choose HINL?

HINL helps property owners, developers, and investors identify hidden risks before they become hidden defects.

Our Pre-Cover Compliance Inspection provides independent verification at one of the most critical stages of construction, helping ensure that workmanship, installations, and construction quality can be assessed before they disappear behind finished surfaces.

Because once it is covered, verification becomes significantly more difficult.

Call To Action

Verify Before It Is Hidden.

Inspect Before You Invest.

HOME HEALTH CHECK (HHC)

Assess the Health of Your Home Before Problems Become Expensive

Short Service Summary

A Home Health Check is a condition-focused inspection designed for occupied homes, helping homeowners identify maintenance issues, safety concerns, aging components, and emerging defects before they become major repairs. It provides valuable insight into the overall health, performance, and condition of your property.

Overview

Just like people benefit from regular health check-ups, homes benefit from periodic condition assessments.

Over time, buildings naturally experience wear and tear. Small defects can develop into major problems if left undetected. Roof leaks, plumbing failures, electrical hazards, dampness, structural movement, and maintenance deficiencies often begin as minor issues before becoming costly repairs.

The HINL Home Health Check (HHC) is designed to help homeowners proactively monitor the condition of their property.

Rather than waiting for something to fail, this service helps identify concerns early, allowing homeowners to plan maintenance, prioritize repairs, improve safety, and protect the long-term value of their investment.

The goal is prevention, not reaction.

Why It Matters

Most building failures do not occur suddenly.

They develop gradually through:

- Deferred maintenance
- Aging building components

- Water intrusion
- Electrical deterioration
- Plumbing defects
- Roof deterioration
- Structural movement
- Environmental exposure

By the time many homeowners notice a problem, significant damage may already have occurred.

A Home Health Check helps:

- Identify maintenance issues early
- Improve property safety
- Reduce repair costs
- Extend building lifespan
- Protect property value
- Improve occupant comfort
- Support proactive maintenance planning

Regular assessments can help prevent small problems from becoming major expenses.

What's Included

Roofing System Assessment

Inspection of:

- Roof coverings
- Flashings
- Gutters and downpipes
- Roof drainage systems
- Visible signs of deterioration
- Water intrusion indicators

Structural Assessment

Inspection of visible:

- Cracks
- Settlement indicators
- Structural movement
- Foundation observations
- Walls, beams, and slabs

Electrical Health Check

Assessment of:

- Distribution boards
- Circuit protection devices
- Visible wiring concerns
- Switches and outlets
- Earthing observations
- General electrical safety conditions

Plumbing Health Check

Inspection of:

- Water supply systems
- Plumbing fixtures
- Drainage systems
- Water storage systems
- Visible leaks
- Water-related defects

Dampness & Moisture Assessment

Assessment of:

- Damp walls
- Water penetration
- Moisture-related concerns
- Ceiling staining
- Mold indicators
- Condensation observations

Interior Areas

Inspection of:

- Floors
- Walls
- Ceilings
- Doors and windows
- Internal finishes
- General condition observations

HVAC & Ventilation

Assessment of:

- Air-conditioning systems
- Ventilation provisions
- Condensate drainage
- General performance observations

General Maintenance Review

Identification of:

- Deferred maintenance items
- Aging components
- Repair priorities
- Property condition concerns

Who Is This Service For?

Homeowners

Maintain your property and identify issues before they become costly.

Long-Term Property Owners

Monitor the condition of aging buildings and building systems.

Landlords

Protect rental properties and improve tenant satisfaction.

Facility Managers

Improve maintenance planning and budgeting.

Diaspora Property Owners

Receive independent condition updates on properties in Nigeria.

Property Investors

Protect long-term asset performance and value.

What You Receive

Home Health Check Report

A professionally prepared report containing:

- Property condition observations
- Maintenance recommendations
- Defect photographs
- Safety observations
- Priority repair items
- Building health assessment

Defect Classification

Findings are categorized as:

● Unsafe

□ Correction Required

□ Monitor

□ Acceptable

Maintenance Planning Guidance

Recommendations to help prioritize repairs and maintenance activities.

Professional Consultation

Opportunity to discuss findings and recommended next steps with an HINL inspector.

Limitations

The Home Health Check is a non-invasive visual inspection of readily accessible components and systems at the time of inspection.

The service does not include:

- Destructive testing
- Engineering analysis
- Specialist investigations

- Laboratory testing
- Concealed components

Additional specialist evaluations may be recommended where necessary.

Why Choose HINL?

Your home is one of your most valuable assets.

HINL's Home Health Check helps you understand its condition, identify emerging issues, and make informed maintenance decisions before problems become expensive repairs.

Through independent inspections and objective reporting, we help homeowners protect their properties, improve safety, and extend the life of their buildings.

Because a healthier home is a safer home.

Call To Action

Don't Wait for a Problem to Become a Repair.

Inspect Before You Invest.

COMMERCIAL INSPECTION (CIB)

Protect Your Commercial Property Investment

Short Service Summary

A Commercial Inspection is an independent assessment of the condition, safety, functionality, and maintenance needs of commercial properties. It helps property owners, investors, lenders, facility managers, and tenants identify defects, operational risks, and capital expenditure concerns before purchase, lease, financing, or occupancy.

Overview

Commercial properties are significant investments that require informed decision-making and ongoing risk management.

Whether acquiring an office building, warehouse, hotel, retail space, school, hospital, industrial facility, or mixed-use development, understanding the property's true condition is critical to protecting both operational continuity and financial performance.

The HINL Commercial Inspection provides a comprehensive assessment of visible building systems, components, and conditions to help stakeholders identify defects, maintenance concerns, safety issues, and deferred maintenance obligations.

Our inspections provide valuable insight into the condition of the property, allowing clients to make more informed decisions regarding acquisition, occupancy, financing, maintenance, and asset management.

Why It Matters

Commercial buildings often contain more complex systems and greater operational risks than residential properties.

Undetected issues can result in:

- Unexpected repair costs
- Business interruptions
- Safety concerns
- Tenant dissatisfaction
- Increased maintenance expenses

- Reduced asset value
- Regulatory concerns
- Capital expenditure surprises

A Commercial Inspection helps:

- Identify defects and deficiencies
- Assess building condition
- Improve investment decisions
- Support due diligence activities
- Improve maintenance planning
- Reduce operational risks
- Protect property value
- Improve occupant safety

Understanding a property's condition before committing to a purchase, lease, or investment can significantly reduce future uncertainty.

What's Included

Site & External Areas

Inspection of:

- Site grading and drainage
- Parking areas
- Access roads
- Walkways
- External structures
- Perimeter conditions

Structure

Inspection of visible:

- Foundations
- Columns
- Beams
- Slabs
- Walls
- Structural cracking
- Settlement indicators

Roofing Systems

Assessment of:

- Roof coverings
- Drainage systems
- Flashings
- Roof penetrations
- Signs of deterioration
- Water intrusion concerns

Building Envelope

Inspection of:

- External walls
- Doors and windows
- Glazing systems
- Waterproofing observations
- Weatherproofing conditions

Electrical Systems

Assessment of:

- Distribution boards
- Switchgear
- Circuit protection devices
- Lighting systems
- Visible wiring installations
- Earthing observations
- Electrical safety concerns

Plumbing Systems

Inspection of:

- Water supply systems
- Drainage systems
- Plumbing fixtures
- Water storage systems
- Visible leaks and deficiencies

HVAC & Mechanical Systems

Assessment of:

- Air-conditioning systems
- Ventilation systems
- Mechanical equipment
- Condensate drainage
- General operational observations

Fire & Life Safety

Inspection of visible:

- Fire extinguishers
- Emergency exits
- Escape routes
- Emergency lighting
- General life safety provisions

Interior Areas

Inspection of:

- Floors
- Walls
- Ceilings
- Doors
- Finishes
- General building condition

General Maintenance Assessment

Identification of:

- Deferred maintenance
- Building deficiencies
- Aging systems
- Repair priorities
- Capital improvement considerations

Who Is This Service For?

Commercial Property Buyers

Understand the condition of a property before acquisition.

Investors

Protect capital and improve investment decisions.

Banks & Financial Institutions

Support property financing and risk assessment activities.

Facility Managers

Improve maintenance planning and operational efficiency.

Property Owners

Understand asset condition and maintenance requirements.

Commercial Tenants

Gain insight into the condition of leased premises before occupancy.

Hotels, Schools & Institutions

Assess building condition and operational risks.

What You Receive

Commercial Inspection Report

A professionally prepared report containing:

- Detailed findings
- Defect descriptions
- Supporting photographs
- Building condition observations
- Safety concerns
- Maintenance recommendations

Defect Classification

Findings are categorized as:

● Unsafe

 Correction Required

 Monitor

 Acceptable

Property Condition Summary

A high-level overview of major concerns and priority items requiring attention.

Professional Consultation

Opportunity to discuss findings and recommendations with an HINL inspector.

Limitations

The Commercial Inspection is a non-invasive visual inspection of readily accessible systems and components at the time of inspection.

The service does not include:

- Engineering design review
- Destructive testing
- Laboratory testing
- Specialist equipment testing
- Environmental assessments
- Regulatory compliance certification

Additional specialist evaluations may be recommended where necessary.

Why Choose HINL?

Commercial property decisions involve significant financial commitments and long-term responsibilities.

HINL provides independent inspections and objective reporting that help stakeholders better understand building condition, identify risks, and make informed decisions regarding acquisition, occupancy, maintenance, and investment.

Because commercial success begins with a clear understanding of the asset.

Call To Action

Understand the Asset Before You Commit.

Inspect Before You Invest.

DIASPORA PROPERTY MONITORING (NIGERIA)

Independent Oversight When You Cannot Be There

Short Service Summary

Global Property Monitoring is a property oversight, document verification, and reporting service designed for diaspora clients, investors, absentee property owners, and organizations with assets in Nigeria. Through scheduled inspections, condition assessments, construction progress monitoring, document verification support, photographic reporting, and independent verification, HINL helps clients stay informed and make confident property decisions from anywhere in the world.

Overview

Owning, building, or investing in property in Nigeria while living abroad can be challenging.

Many diaspora property owners face concerns about construction quality, project progress, property condition, maintenance, security, and the authenticity of documents associated with their investments.

Without regular oversight and reliable information, minor concerns can become major financial, operational, or legal problems.

The HINL Global Property Monitoring Service provides independent property oversight for clients who cannot be physically present to monitor their assets.

Through scheduled site visits, condition assessments, construction progress reviews, document verification support, and professional reporting, we help clients maintain visibility, improve accountability, and protect their investments.

Whether you own a home, apartment, commercial property, development project, or family estate, our objective is to serve as your independent eyes and ears on the ground.

Why It Matters

Distance often creates uncertainty.

Many property owners abroad struggle with questions such as:

- Is my property being properly maintained?
- Is construction progressing as planned?
- Are contractors delivering quality work?
- Are there signs of defects or deterioration?
- Are repairs being completed correctly?
- Are the documents provided genuine and consistent?
- Has anything changed since my last visit?

Without reliable information, important decisions are often based on assumptions.

Global Property Monitoring helps:

- Protect property investments
- Improve transparency
- Reduce uncertainty
- Verify construction progress
- Monitor property condition
- Support document verification
- Identify maintenance concerns early
- Improve accountability among contractors and service providers
- Provide peace of mind

Confidence comes from independent verification.

What's Included

Property Condition Assessments

Periodic inspections of:

- Residential properties
- Apartments
- Estates
- Commercial properties
- Development projects

Construction Progress Monitoring

Verification of:

- Construction activities
- Project progress

- Workmanship observations
- Quality concerns
- Construction milestones
- General site conditions

Property Maintenance Checks

Assessment of:

- Building condition
- Maintenance concerns
- Water damage
- Roof condition
- Signs of deterioration
- General property performance

Security & Occupancy Observations

Inspection of:

- Property access points
- Security conditions
- Occupancy status
- Site activity
- Visible security concerns

Document Verification Support

Review and verification support for property-related documentation including:

- Title documents
- Survey plans
- Building approvals
- Allocation documents
- Deeds and conveyance documents
- Construction drawings
- Contractor documentation
- Project records

The objective is to identify inconsistencies, missing information, and areas requiring further professional review.

Photographic Documentation

Comprehensive photographic records of:

- Property condition
- Construction progress
- Defects
- Maintenance concerns
- Significant observations

Defect Identification

Identification and reporting of:

- Safety concerns
- Construction defects
- Maintenance deficiencies
- Water intrusion
- Damage observations
- Emerging risks

Custom Monitoring Requests

Monitoring activities may be tailored to specific client objectives and project requirements.

Who Is This Service For?

Diaspora Homeowners

Monitor and protect properties in Nigeria while living abroad.

Diaspora Property Buyers

Receive independent verification of property condition and supporting documentation before purchase.

Property Investors

Conduct additional due diligence before investing in Nigerian real estate.

Families Managing Shared Assets

Receive independent reporting on family-owned properties.

Construction Project Owners

Track project progress and construction quality remotely.

Commercial Property Owners

Monitor asset condition, maintenance activities, and operational concerns.

Corporate Clients

Maintain oversight of staff housing and property assets.

What You Receive

Property Monitoring Report

A professionally prepared report containing:

- Current property condition
- Progress updates
- Defect observations
- Maintenance concerns
- Supporting photographs
- Recommendations where applicable

Document Verification Summary

A summary outlining:

- Documents reviewed
- Observations made
- Missing information identified
- Verification findings
- Recommended next steps

Photographic Updates

Visual documentation supporting inspection findings and project updates.

Property Status Summary

A concise overview highlighting:

- Condition changes
- Key observations
- Areas requiring attention
- Recommended actions

Professional Consultation

Opportunity to discuss findings and recommendations with an HINL inspector.

Monitoring Frequency

Monitoring visits may be scheduled:

- Monthly
- Quarterly
- Biannually
- Annually
- At key construction milestones
- On-demand as required

Programs can be customized to suit individual client requirements.

Limitations

Global Property Monitoring is an observation, verification support, and reporting service based on conditions visible and accessible at the time of inspection.

The service does not constitute:

- Property management services
- Contractor supervision
- Security services
- Engineering design services
- Legal advice
- Legal due diligence
- Title certification
- Land ownership determination
- Government approval certification
- Property valuation services

Clients may be referred to qualified legal practitioners, registered surveyors, valuers, or other specialists where additional verification is required.

Why Choose HINL?

HINL provides independent, objective, and professional property oversight that helps clients stay informed regardless of where they live.

By combining property inspections, construction progress monitoring, document verification support, and professional reporting, we help diaspora clients reduce uncertainty, improve accountability, and make informed property decisions with confidence.

When you cannot be there, HINL helps ensure that someone trustworthy is.

NO-UTILITY INSPECTION (NUI)

Valuable Property Insight Even Before Utilities Are Connected

Short Service Summary

A No-Utility Inspection is a specialized inspection designed for newly completed or vacant properties where electricity, water, gas, or other utility services are not yet available for full operational testing. The inspection focuses on construction quality, workmanship, visible defects, installation quality, safety observations, and occupancy readiness based on observable conditions at the time of inspection.

Overview

Many newly completed properties in Nigeria are presented for handover before utility services become fully operational.

Electricity may not yet be connected. Water systems may not be commissioned. Gas installations may not be active. In some cases, occupancy has not yet begun.

These conditions make traditional operational testing difficult or impossible.

The HINL No-Utility Inspection (NUI) is specifically designed for these situations.

Rather than postponing the inspection, our inspectors evaluate the quality of completed works, visible installations, workmanship, safety concerns, and occupancy readiness based on what can be independently verified at the time of inspection.

The objective is simple: to provide valuable insight into the condition of a property even when utilities are unavailable.

This enables buyers, investors, developers, lenders, and diaspora clients to make informed decisions without unnecessary delays.

Why It Matters

Many clients assume an inspection cannot be performed until electricity, water, and gas services become operational.

In reality, a significant number of construction defects and workmanship concerns can be identified without active utility connections.

Common findings may include:

- Poor workmanship
- Incomplete works
- Damaged finishes
- Roofing deficiencies
- Drainage concerns
- Installation defects
- Safety hazards
- Structural concerns
- Water management issues
- Visible plumbing deficiencies
- Visible electrical deficiencies
- Poor quality installations

Waiting for utilities to become available may delay defect identification and reduce opportunities for corrective action before handover.

A No-Utility Inspection helps identify concerns while responsibility remains with the contractor, developer, or seller.

What's Included

Structural Assessment

Inspection of visible:

- Foundations (where accessible)
- Columns
- Beams
- Walls
- Slabs
- Structural cracking observations
- Construction quality indicators

Roofing Assessment

Inspection of:

- Roof coverings
- Flashings

- Gutters
- Downpipes
- Roof drainage systems
- Visible roof defects
- Water management provisions

Site & External Areas

Assessment of:

- Site grading
- Surface drainage
- External paving
- Boundary walls
- Retaining structures
- External finishes
- General site conditions

Interior Assessment

Inspection of:

- Floors
- Walls
- Ceilings
- Doors
- Windows
- Joinery
- Finishes
- General workmanship quality

Visible Electrical Assessment

Inspection of:

- Distribution boards
- Electrical fixtures
- Switches
- Outlets
- Conduit installations
- Earthing provisions
- Installation quality observations

Note: Operational testing is not performed where electrical power is unavailable.

Visible Plumbing Assessment

Inspection of:

- Plumbing fixtures
- Pipe installations
- Drainage provisions
- Water storage systems
- Visible plumbing workmanship
- Installation observations

Note: Flow testing is not performed where water supply is unavailable.

Safety Assessment

Identification of:

- Occupancy hazards
- Incomplete works
- Unsafe conditions
- Fall hazards
- Life safety concerns

Workmanship Assessment

Evaluation of:

- Finishing quality
- Installation quality
- Construction workmanship
- Defective work
- General construction standards

Defect Identification

Identification and documentation of:

- Construction defects
- Installation deficiencies
- Incomplete works
- Quality concerns
- Safety observations
- Corrective actions required

Who Is This Service For?

Home Buyers

Verify the condition of a property before taking possession.

Diaspora Clients

Receive independent verification before travelling, relocating, or completing a transaction.

Property Developers

Improve handover quality and reduce disputes.

Property Investors

Assess construction quality before occupancy or acquisition.

Banks & Mortgage Institutions

Gain additional confidence regarding property condition.

Estate Developers

Verify construction quality before project handover.

Property Sellers

Demonstrate transparency and improve buyer confidence.

What You Receive

No-Utility Inspection Report

A professionally prepared report containing:

- Inspection findings
- Defect photographs
- Workmanship observations
- Construction quality concerns
- Safety observations
- Recommended corrective actions

Occupancy Readiness Summary

A summary highlighting:

- Major concerns
- Safety issues
- Incomplete works
- Areas requiring correction
- General property readiness

Defect Classification

Findings are categorized as:

● Unsafe

 Correction Required

 Monitor

 Acceptable

Professional Consultation

Opportunity to discuss findings, limitations, and recommended next steps with an HINL inspector.

Limitations

Because utility services may not be available, the inspection does not include operational testing of:

- Electrical systems
- Water supply systems
- Gas systems
- Appliances
- Pumps
- Mechanical equipment
- HVAC systems requiring power
- Water-dependent fixtures

The inspection is limited to visible and accessible conditions observed at the time of inspection.

Where utilities become available later, HINL may recommend a follow-up Standard Home Inspection or Move-In Certification.

Why Choose HINL?

Many properties in Nigeria are handed over before utility services become operational.

Rather than waiting for electricity, water, or gas connections, HINL's No-Utility Inspection provides valuable insight into construction quality, workmanship, safety, and occupancy readiness based on what can be independently verified at the time of inspection.

Our inspectors help clients identify concerns early, improve transparency, and make informed decisions before taking possession.

Because informed decisions should not depend on utility connections.

Call To Action

No Light. No Water. No Problem.

Verify the Property Before You Take Possession.

Inspect Before You Invest.
